<http://www.stoa.org/projects/ph/index.html>

Casa di M. Lucretius Fronto

Form of house

This house had two entrances: one on the east side of the street between Insulae V 5 and V 4 and one on the west side of the street between Insulae V 3 and V 4. It had a ground-floor area of c. 570 m², thus belonging to Wallace-Hadrill's Quartile 4 (1994:81). The house conformed to a front-hall/garden plan, except that these areas were not precisely aligned and the front hall had side rooms on only one side.

Excavation reports

Unpublished: GdSc A,VI,4 (Nov. 1899 – Oct 1904):23 – 55.

GREEK THEATER

This small theater, which had a rare oval plan, could hold between 2,900 and 3,600 spectators (R. Hidalgo, "Il cosiddetto Teatro Greco," *Lazio e Sabina* 8 [2012] 24). It consisted of a pulpitum (stage; 8) with a scaenae frons (stage building; 9), a semi-circular orchestra (1), a cavea (seating area; 4-5) with two maeniana (blocks of seats) divided by a praecinctio (aisle) to which were connected three vomitoria (entrance passageways). At the top of the cavea was a pulvinar (imperial box; 12). Despite the (modern) name, the structure does not have the canonical plan of a Greek theater. Recent excavations by Hidalgo show that the theater lacked a porticus post scaenam (peristyle behind the stage), a feature often associated with Roman theaters, but was set in the middle of a garden with fountains, pavilions, and topiary. As Hidalgo observes, the design was "a potpourri of elements belonging to Greek and Roman theaters united in a form and language that is innovative"

Basilica Iulia

Civic basilica housing the centumviral court as well as shops

Reconstructed state: Building as first dedicated on site

► subfeature of [Forum \(Romanum or Magnum\)](#)

Alternate names: Iulia Tecta, Basilica Julia, Basilica Gai et Luci, Basilica Sempronia

Located on the southern side of the Forum between the Temple of Saturn to the west and the Temple of Castor to the east, the Basilica Iulia underwent two major building phases: the first, under Augustus; the second when it was restored after the great fire of 283 AD. Very little survives comes from the late-antique phase. The building was 107 meters long x 5 meters wide. The long sides had 17 arcades, the short sides, 7. The facade was faced in white marble. The central hall measured 75 meters x 16 meters and rose three stories high. It was paved in white marble. The surrounding side aisles were two stories high, vaulted, 5.5 meters wide; the pavement was made of colored marbles. The third storey of the central nave permitted clerestory lighting. There was an extra aisle on the Forum side, which served as an entrance to the complex. On the corresponding side to the south were shops and staircases to the upper floor. In the shops were housed, among other things, the *nummi de basilica Iulia* (cf. CIL VI 9707).
